

Smart Construction Simulation 2025.2.4(Schedule) About the Release Version

- We are pleased to announce the release of updates to "Smart Construction Simulation" with the following schedule and content.
- Due to system maintenance, the relevant services will not be available during the following dates.
 (*The release schedule, time, and contents are subject to change depending on the situation. Please understand this in advance.)

Schedule : Tuesday, February 4 (Japan time) 7:00 p.m. - 12:00 p.m.

NO.	Target Functions	Overview
1	Simulation (Function Improvement)	<ul style="list-style-type: none"> • Overview : Improvement of "Shrink/Swell" on the cut and fill volume screen • Details : Functional improvements and bug fixes have been made regarding the rate of change on the face fill volume screen. Please refer to the following for details of the changes. <p><Improvement>The Swell item is hidden.</p>  <p><Fixed bug>The display of the Embankment Amount screen is not linked to the change of Shrink.</p>

2	Simulation (Function Improvement)	<ul style="list-style-type: none"> • Overview : Implemented synchronization of coordinate system information from other applications • Details : Coordinate system information is now saved in the platform. In addition, when coordinate system information is updated in other applications, the settings can now be synchronized when the coordinate system is changed when Simulation is displayed. <div style="display: flex; justify-content: space-around;"> <div data-bbox="611 635 1386 1198"> <p style="text-align: center;">When simulation is displayed</p>  <p style="text-align: center;">Displayed when there is a history of coordinate system information updates in other apps. Please select "Do not use this coordinate system" and close the Synchronization Msg until a workaround is implemented.</p>  </div>

3	Machine Simulation (Bug Repair)	<ul style="list-style-type: none"> Overview : Fixed an issue that caused a period exceeded error when setting a specific construction machine after a drilling hauling bull. Details : A problem has been corrected in which a different role was set after the bulldozer in the “Excavation and Haulage Combination” at the unloading area, causing the period to be exceeded.

6	Machine Simulation (Bug Repair)	<ul style="list-style-type: none"> Overview : Fixed a problem that when adding a runway, if the role is changed after changing the number of units, it is not set with the number of units after the change. Details : When adding a runway, if the number of construction machines was changed and then the role was changed, the runway would not be created with the changed number of machines. The problem has been corrected so that the runway is created correctly with the changed number of machines.
